Zeeshan Younas

AI Engineer | LLM Applications, RAG, Agents & Automation

Lahore, Pakistan | +92-304-6852483 | zeeshanyounas443@gmail.com

LinkedIn | GitHub | Portfolio | Kaggle

Professional Summary

AI Engineer with 2+ years of experience building LLM-powered products, RAG systems and multi-step AI agents with Python, LangGraph and FastAPI. Delivered AI applications for an international client, covering retrieval, agent workflows, APIs and deployment. Additional experience in computer vision and machine learning.

Technical Skills

Agentic AI & LLM Engineering: LLMs, LangChain, LangGraph, Multi-Agent Workflows, Tool Calling, State & Memory Management, MCP, Prompt Engineering

RAG & Retrieval Systems: RAG Architecture, Embeddings, Document Chunking & Indexing, Semantic & Vector Search, FAISS, ChromaDB, LlamaIndex, Retrieval Evaluation

ML, Deep Learning & Computer Vision: Machine Learning, Deep Learning, NLP, YOLO, OpenCV, ByteTrack, Object Detection & Tracking, CNNs, Transformers

Programming, Backend & Data: Python, FastAPI, REST APIs, NumPy, Pandas, SQL, PostgreSQL

Cloud, DevOps & Deployment: AWS, Docker, Kubernetes, GitHub Actions, CI/CD, Git

Professional Experience

AI/ML Engineer Jan 2026 – Present

Minhaj Solutions Limited

- Built internal automation tools that reduced manual team work by approximately 70%.
- Built weekly sales demand forecasting models, contributing to an approximately 10% reduction in inventory costs.

Generative AI Engineer Jul 2024 – Oct 2025

Efaida Technologies

- Worked directly with an international client, turning business requirements into delivered Generative AI applications, including RAG-based assistants and LangGraph agent workflows.
- Built and deployed full-stack AI products with FastAPI backends and React frontends.

Projects

Clinic AI Receptionist Agent | *Python, FastAPI, LangGraph, Groq, SQLAlchemy, React, Docker*

- Built a full-stack AI receptionist that answers patient questions using clinic-specific data through RAG.
- Designed LangGraph agent workflows for appointment booking, rescheduling and cancellation, backed by SQLAlchemy.
- Added WhatsApp, email and calendar integrations, a React dashboard and Docker Compose deployment.

AI Trading Assistant | *Python, FastAPI, React, Machine Learning*

- Built a market-analysis platform for forex, commodities and crypto that produces BUY, SELL, HOLD and WAIT signals across 5m–1d timeframes.
- Combined technical indicators (EMA, SMA, RSI, MACD, ATR), an ML prediction model and news sentiment features into confidence-scored signals.
- Added ATR-based risk management (stop-loss, risk/reward, support/resistance), a signal-explanation chatbot, and live data from TwelveData with a yfinance fallback.

AI Attendance System | *Python, FastAPI, React, Vite*

- Built a monorepo attendance platform with a FastAPI backend and a React/Vite frontend, designed for production scale.
- Implemented a hybrid monorepo architecture with clear backend/frontend separation for smooth feature delivery.
- Designed for reliability, fast maintenance and easy scaling across frontend and backend teams.

SteelSight AI | *Python, PyTorch, OpenCV, FastAPI, PostgreSQL, React, Docker*

- Developing an AI platform that detects and segments steel surface defects (4 classes, Severstal dataset) using a PyTorch U-Net, returning pixel-level masks, defect area and quality decisions.
- Building FastAPI and PostgreSQL services, a React dashboard for image and video inspection with a human review workflow, and PDF/CSV reports, deployed with Docker.

Achievements

Kaggle Datasets Grandmaster (30+ notebooks and datasets) | **lablab.ai Hackathon Winner**

Education

BS Data Science
